

TONEBUG REVERB

REVERB |'re,vərb; ri'vərb|

an effect whereby the sound produced by an amplifier or an amplified musical instrument is made to reverberate slightly.

– *New Oxford American Dictionary*

T-REX REVERB |tē reks'rē, vərb; ri'vərb|

a huge, vibrant, gorgeous-sounding effect that brings your sound to life by putting you right on stage in a everything from a dark, sweaty blues club to a monster stadium.

– *Guitarists around the world*

It's alive!

T-Rex Engineering is proud to announce Reverb, a stunning new reverb pedal built with one goal in mind: to bring dry, flat-sounding, bedroom-bound guitar playing to life. Reverb simulates real-life performance environments – from huge echoey concert halls and modern-sounding live stages, to raunchy clubs and basement dives. But no matter what setting you choose, loads of incredible T-Rex tone will keep you sounding like the best of them

Modern or spring

What makes Reverb so versatile is its ingenious dual-mode feature. The mode switch lets you go from Modern, for more contemporary reverb sounds, to Spring – for a world of vintage reverb that sounds almost too authentic to be true. It's really like having two separate pedals in one. Try T-Rex Reverb today, and discover why it's the one pedal you'll never want to live without.
